

Uday Kumar G

uday242004@gmail.com — (+91) 9663487366 — LinkedIn — GitHub — Portfolio

SKILLS

Languages: Python, C++, Java, C (Basics)

Frameworks & Tools: TensorFlow, Keras, PyTorch, OpenCV, Git, GitHub, Ubuntu, VS Code, Flutter, Docker, Linux

Core Skills & Machine Learning: Data Structures and Algorithms (DSA), Object-Oriented Programming (OOPs), Operating Systems (OS), SQL, Computer Networking, Regression, Classification, Clustering

EXPERIENCE

AURIZE

Mar 2026 – Present

Founder (Independent Project)

- Built and deployed a gamified fitness mobile application on Google Play with real-time exercise tracking and AI-based activity recognition.
- Scaled to 13K+ users with 6K MAU and 400–800 DAU, including 40+ paid users.
- Implemented application logic and data handling using Firebase services, with Python-based ML pipelines for exercise tracking.
- **Tech:** Flutter (Dart), Firebase (Firestore), Python, TensorFlow, Android Studio

Unisys

Jul 2024 – Aug 2024

Summer Intern (Hybrid)

- Built an automated reporting pipeline for dashboard refresh and data extraction, eliminating manual workflows and reducing effort by 70% (5+ hrs/week).
- Delivered the solution 15 days ahead of schedule with a fully automated end-to-end system.
- **Tech:** Python, Selenium, WebDriver, Power BI

EDUCATION

Ramaiah Institute of Technology

Dec 2022 – Present

Bachelor of Engineering in Artificial Intelligence and Machine Learning (CGPA: 9.00)

Bengaluru, India

PROJECTS

VisuWeave – Python, Speech-to-Text, NLP, OpenCV, GANs, Reinforcement Learning

- Built a full-stack system that converts natural language into dynamic visualizations on a canvas with < 2s latency.
- Designed a multi-stage pipeline: speech-to-text, keyword extraction, multi-source image retrieval, motion-based rendering, and validation for accurate visual output. **GitHub Repo**

EcoVista – Python, OpenCV, YOLOv8, Machine Learning, Android Development, IoT

- Developed an AI-based waste management system integrating software, IoT hardware, and mobile applications for automated waste segregation and litter detection.
- Built a custom-trained model for multi-class waste classification and a face recognition-based monitoring system that detects littering and sends alerts via a mobile application. **GitHub Repo**

ACHIEVEMENTS, PATENT & PUBLICATIONS

• Patents:

- (i) Indian Patent (2024) – “Enhanced Solution for Garbage Collection and Segregation Using Computer Vision and IoT,” Application No. 202441050632;
- (ii) “AI-Driven Fault-Tolerant Hexapod with Autonomous Gait Adjustment and Human Intent Engine,” Patent Application (In Preparation, 2026).

• Publications:

- (i) “VisuWeave: Dynamic Concept Visualization driven by a Novel Piston Framework,” Elsevier (Procedia Computer Science), 2025;
 - (ii) “Forecasting Future Water Requirements and Assessing Storage Capacities in Reservoirs,” Springer (ICTIS), 2025.
- 1st Runner-up at Unisys Innovation Program (UIP) Y15 (National) and Top 6 in Y16; won multiple 24+ hr hackathons.
